SERVICES AUTOMATION OF
POS TESTING PROCESSES

Experience	Speed	Security	Scalable	Beneficial	Certificate

NON-INVASIVE

ATaaS Technology® is not invasive. In this way, it generates a single knowledge base, which allows the information to remain in the organization and be reusable.

TESTING 24x7

ATaaS Technology® executes Test Cases in an interrupted manner, reducing the execution of the Test Cases more than 24 times to the current time.
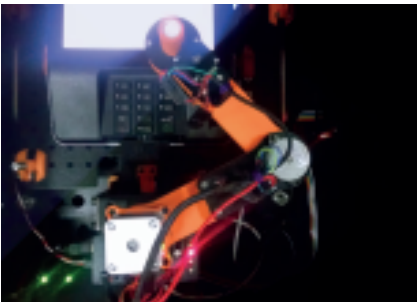

TIME TO MARKET

ATaaS Technology® reduces costs and manages control risks over Production (IC) / Time Saving / Savings resources

ATaaS Technology is developed by **rhiscom**®

Efficiency in test times compatible with multiple platforms

Lorem ipsum

ATaaS Technology® Automated Testing as a Service, is the sum of Hardware, Software and Service that allows Systematize and Automate the testing process of POS applications to ensure its quality before going to production.

The system Learns from the operation based on the Plans and Test Cases executed. The execution of the test plans verifies that the functional behavior and response times of the application are as expected.

ATaaS Technology® is a platform for integration and continuous automation of Testing and Learning, which allows to systematize and automate the testing process of POS applications. The system learns from the operation in the POS system, based on the inputs and outputs that are generated, according to the execution of test cases that are performed the first time.

Once the system learns from the test cases executed in the POS application, ATaaS Technology® is in a position to perform regression tests, that is, it allows to verify in a permanent and unattended manner that the functional behavior of the POS application is known. This allows to verify that the modifications in components and environment of POS did not cause unexpected effects and that the system or components continue to meet the specified requirements.

ATAAS TECHNOLOGY

1

ATaaS Technology® records the Test Cases (CDP)

2

Once the CDP recording is done ATaaS Technology® plans the order of execution through its application that emulates the devices.

3

ATaaS Technology® runs the test CDP automatically

How we automate tests?

ATaaS Technology® It is service and technology of automatic and regressive testing for systems, internal and in person. We have a unique service based on good automation practices, RH-QA methodology, In-House mode and Outsourcing of regression, Stress and Performance tests (CPU, System), Unit Tests, Integral and End to end (E2E).

Types of services

VIRTUALIZATION

COMMUTATION

MONITORIZATION

ROBOTIZATION

EMULATION

AUTOMATIZATION

SIMULATION

Quality Testing
(Base service)

Continuous follow-up with the objective of confirming that your applications do what they have to do.

Performance Testing
(On demand)

Make your POS applications more producti-ve while detecting improvement points in the speed of the process.
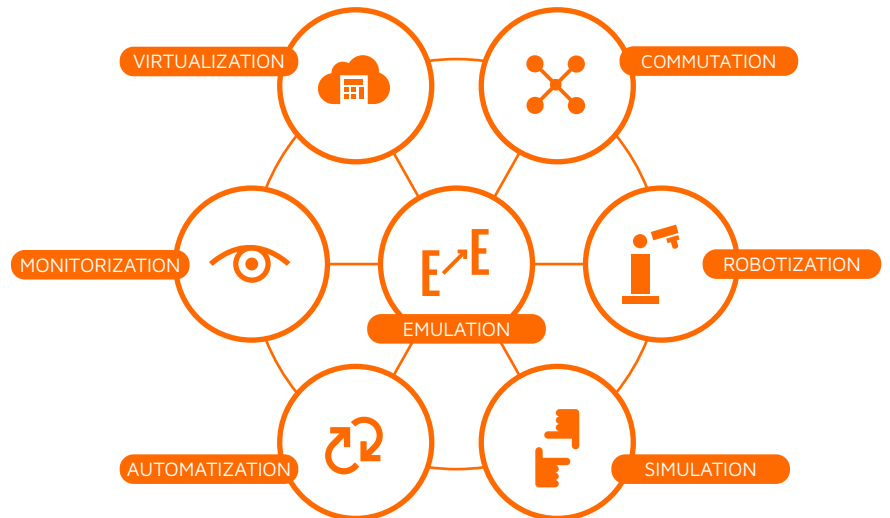

Security Testing
(On demand)

Ensure the accomplishment of security regulations.

Saturation and Stress Testing (On demand)

Ensure the quality of smooth checkout services processed, in high seasons or stablishing its operational threshold.

Integration Testing
(On demand)

Verify the interfaces and procedures that integrate the systems.

Testing Installation and Configuration (On demand)

Ensure the installation and configuration procedures of the systems in the point of sales
